SUMMARY

Software Engineering student with hands-on experience in AI-driven applications, backend development, and distributed systems. Skilled in Java, Python, Apache Kafka, Apache Spark, and Machine Learning, with a strong foundation in data structures, algorithms, and software engineering. Passionate about building scalable, production-grade software.

EDUCATION

VidyaVardhaka College of Engineering, Mysore (2027) | Bachelor of Engineering in Information Science Engineering | CGPA: 9.63

SKILLS

Programming languages: Java, Python, C

Core CS concepts: Operating System, Object oriented Programming (OOP), Computer Networks, Data Structures and algorithms, System Design, SDLC

Databases: MySQL, PostgreSQL

Developer tools: Git, GitHub, Postman, Docker

Other technologies: Machine learning, Artificial Intelligence, Apache Spark, Apache Kafka, Google Cloud Platform (in-progress)

EXPERIENCE

1. Virtual AI Internship – Infosys Springboard | Remote | 10 Nov, 2025– 10 Jan 2026

Project: Dog Breed Prediction System with AI Chatbot | DenseNet, Gemini API, Flask, Postman, JSON, Image preprocessing

- Built a Flask-based RESTful backend for image classification and AI chatbot interaction, deploying a DenseNet model at 97% accuracy as the team's final model.
- Integrated a Gemini-powered chatbot for contextual breed insights and prediction fallback, with added shopping, location, and dietary-recommendation features.
- Validated system reliability through REST API testing in Postman.

2. Project Intern – Hewlett Packard Enterprise | Remote | 19 Feb, 2026 – 1 Jul, 2026

Project: ATLAS – Scalable Telemetry Data Streaming & Analytics Platform

- Built a real-time telemetry pipeline (ingestion API, Kafka, Spark, Delta Lake, ClickHouse) for stream and batch analytics, scaling from 10 to 1,000+ concurrent devices.
- Engineered a fault-tolerant event pipeline with schema validation, checkpointing, watermarking, and DLQ handling to ensure reliability at scale.
- Optimized Spark write operations and Delta Lake-based deduplication to improve throughput and data quality across real-time and batch workflows.
- Containerized services with Docker and managed collaborative development via Git/GitHub.

PROJECT

1. Pharma Multi-Agent Decision Support Platform ([deployed app](#))

Tech Stack: Python, Streamlit, Ollama, Orchestration, NLP, Transformers

- Designed an orchestrator-based multi-agent AI system coordinating specialized LLM agents for market intelligence, clinical evidence, patent analysis, supply chain risk, and knowledge retrieval.
- Integrated ClinicalTrials.gov and SerpAPI with LLM-driven analysis to generate context-aware, unified recommendations across agents.
- Built an interactive Streamlit app supporting real-time queries, automated report synthesis, and downloadable PDF reports.

HACKATHON/COMPETITION/EVENT PARTICIPATION

Flipkart Grid 6.0, 7.0, EY Techathon 5.0, 6.0, Infosys Springboard Summit, 2024 & 2025, UnstopTalent Park 2025, Flinders AI Competition, College level events

HONORS AND AWARDS

AIML Lead, Google Developer Group on Campus (GDGoC), Department Topper (Semesters 1–5), Best CO-curricular achiever-

Semester 4, Facilitated at Infosys Springboard Summit, 2025, Team featured in Flinders University AI competition
